# Advisors

Advisors to 'Marine Ecology – Progress Series' are appointed for a four-year period. They are expected to:

- ○ critically evaluate the scientific merits of manuscripts submitted for publication
- ○ suggest topics and authors for reviews
- ○ select and present suitable high-quality manuscripts
- ○ draw attention to new facts, concepts and method

In addition to the advisors listed below, about 300 referees cooperate anonymously.

# MARINE ECOLOGY – PROGRESS SERIES

**History:** 'Marine Ecology – Progress Series' was established in response to requests from numerous marine ecologists om all over the world. The series is based on 'Marine Ecology' – the first comprehensive, integrated treatise on life in ceans and coastal waters – conceived, organized and edited by Professor Otto Kinne and published by John Viley & Sons.

**Aim:** 'Marine Ecology – Progress Series' serves as world-wide forum for all aspects of marine ecology, fundamental and pplied. The journal covers microbiology, botany, zoology, ecosystem research, biological oceanography, fisheries, quaculture, pollution, environmental protection, diseases, conservation and resource management.
Ecological research has become of paramount importance for man's future. The information presented here should, herefore, encourage critical application of ecological knowledge for the benefit of mankind and, in fact, of life on earth. Marine Ecology – Progress Series' strives for

- complete coverage of the field of marine ecology
- the highest possible quality of papers
- quick publication
- a high technical standard of presentation.

Editor and publisher attempt to achieve these goals in close cooperation with advisors, contributors and readers. Criticism nd advice are cordially invited (please address to the editor).

**Scope:** 'Marine Ecology – Progress Series' is international and interdisciplinary. Presenting research papers, reviews and otes, it has been created for prompt publication of contributions concerned with:

I. Environmental Factors: Tolerances and responses of marine organisms (microorganisms, autotrophic plants, and animals) to variations in abiotic and biotic components of their environment; radioecology.

II. Physiological Mechanisms: Synthesis and transversion of organic material (mechanisms of auto- and heterotrophy); thermo-, ion-, osmo- and volume regulation; stress resistance; non-genetic and genetic adaptation; population genetics; orientation in space and time; migrations; behaviour.

III. Cultivation: Maintenance and rearing of, as well as experimentation with, marine organisms under environmental and nutritional conditions which are, to a considerable degree, controlled; analysis of the physiological and ecological potential of individuals, populations and species; determination of nutritional requirements; ecological aspects of aquaculture; water-quality management; culture technology.

IV. Dynamics: Production, transformation, and decomposition of organic matter in marine ecosystems; food webs; trophic interrelations; population dynamics; plankton ecology; benthos ecology; estuarine and coastal ecology; wadden-sea ecology; coral-reef ecology; deep-sea ecology; open-ocean ecology; polar ecology; theoretical ecology; ecological modelling; evolution; diseases of marine organisms.

V. Ocean Management: Organismic zonations and assemblages; worldwide marine organic resources; all aspects of fisheries; pollution of marine environments; protection of life in the seas; management of populations, species and ecosystems; management of coastal zones and sea areas.

# Manuscript Preparation, Mailing and Processing

**Preparation**

Research papers (in general not exceeding 10 printed pages), reviews (in general up to 40 printed pages) and notes (1–3 printed pages) must be typewritten with double spacing. 'Marine Ecology – Progress Series' invites interpretative rather than descriptive contributions. Reviews should be critical, instructive evaluations of the state-of-the-art – not mere compilations of information.

Abstracts. All contributions must be preceded by a brief, concise abstract. In the shortest possible way, the abstract should outline the scope of the paper and highlight its main results and conclusions.

Figures must be very carefully prepared, numbered and accompanied by brief, precise legends. For examples consult recent issues. Mark desired position of figures in the manuscript margin.

Tables should not be excessive in size. They must be numbered and be headed by brief, compendious legends. Mark desired position of tables in the manuscript margin. Unusual symbols used must be explained.

Genus and species names: underline for *italics*. Genus names should appear in full the first time mentioned in a given paragraph.

Citation of literature. All literature quoted in the text must be listed, in alphabetical order of author names, at the end of the manuscript. Please abbreviate publications according to 'World List of Scientific Periodicals', latest edition, London. For examples of literature citation see below.

**Mailing**

Address manuscripts (original plus 2 copies) to an advisor or to the editor. For safety use registered mail.

**Processing**

Manuscripts are critically evaluated by at least 3 reviewers. The editor then decides on acceptance or rejection. Acceptable manuscripts are usually returned to the author requesting consideration of comments and criticism. Present rejection rates range from 36 to 52 % for manuscripts from different parts of the world.

When an accepted manuscript is ready for publication, the author will be notified and the date of manuscript acceptance fixed. This date appears at the end of each printed contribution. Average time between acceptance and publication is 3 mo.

The author receives 2 sets of proofs directly from the printer. Printing errors must be carefully corrected. At this stage, stylistic changes are not acceptable without compensatory payment. Please return 1 set of proofs by air mail.

Offprints: Sixty offprints (reprints) of each contribution will be made available free of charge. Additional offprints can be purchased. For offprint prices consult the form accompanying the proofs. Orders for additional offprints must be made when returning the proof (use the form provided).

'Marine Ecology – Progress Series' levies no page charge.
The last issue of each set of 10 volumes features a combined author/title index.

RESEARCH PAPERS

**Grigg, R. W.**
Community structure, succession and development of coral reefs in Hawaii 1–14

**Berge, J. A., Valderhaug, V. A.**
Effect of epibenthic macropredators on community structure in subtidal organically enriched sediments in the inner Oslofjord 15–22

**Sherman, K. M., Reidenauer, J. A., Thistle, D., Meeter, D.**
Role of a natural disturbance in an assemblage of marine free-living nematodes 23–30

**Pamatmat, M. M., Findlay, S.**
Metabolism of microbes, nematodes, polychaetes, and their interactions in sediment, as detected by heat flow measurements 31–38

**Møller Jensen, L.**
Phytoplankton release of extracellular organic carbon, molecular weight composition, and bacterial assimilation 39–48

**Schnack, S. B.**
On the feeding of copepods on *Thalassiosira partheneia* from the Northwest African upwelling area 49–53

**Lopez, G. R., Cheng, I.-J.**
Synoptic measurements of ingestion rate, ingestion selectivity, and absorption efficiency of natural foods in the deposit-feeding molluscs *Nucula annulata* (Bivalvia) and *Hydrobia totteni* (Gastropoda) 55–62

**Boto, K. G., Wellington, J. T.**
Phosphorus and nitrogen nutritional status of a northern Australian mangrove forest 63–69

**Regnault, M., Lagardère, J.-P.**
Effects of ambient noise on the metabolic level of *Crangon crangon* (Decapoda, Natantia) 71–78

**Scranton, M. I.**
The role of the cyanobacterium *Oscillatoria (Trichodesmium) thiebautii* in the marine hydrogen cycle 79–87

REVIEW

**Jørgensen, C. B.**
Fluid mechanical aspects of suspension feeding 89–103

RESEARCH PAPERS

**Johannes, R. E., Wiebe, W. J., Crossland, C. J., Rimmer, D. W., Smith, S. V.**
Latitudinal limits of coral reef growth 105–111

**Fricke, H. W., Hottinger, L.**
Coral bioherms below the euphotic zone in the Red Sea 113–117

**Fallon, R. D., Newell, S. Y., Hopkinson, C. S.**
Bacterial production in marine sediments: will cell-specific measures agree with whole-system metabolism? 119–127

**Littler, M. M., Martz, D. R., Littler, D. S.**
Effects of recurrent sand deposition on rocky intertidal organisms: importance of substrate heterogeneity in a fluctuating environment 129–139

**Pienkowski, M. W.**
Surface activity of some intertidal invertebrates in relation to temperature and the foraging behaviour of their shorebird predators 141–150

**Abrams, R. W.**
Pelagic seabirds and trawl-fisheries in the southern Benguela Current region 151–156

**Sulkin, S. D., Van Heukelem, W. F., Kelly, P.**
Behavioral basis of depth regulation in hatching and post-larval stages of the mud crab *Eurypanopeus depressus* 157–164

**Ueda, H., Kuwahara, A., Tanaka, M., Azeta, M.**
Underwater observations on copepod swarms in temperate and subtropical waters 165–171

**McLusky, D. S., Anderson, F. E., Wolfe-Murphy, S.**
Distribution and population recovery of *Arenicola marina* and other benthic fauna after bait digging 173–179

**Russell, G.**
Formation of an ectocarpoid epiflora on blades of *Laminaria digitata* 181–187

**Myers, R. A., Runge, J. A.**
Predictions of seasonal natural mortality rates in a copepod population using life-history theory 189–194

**Shaw, K. M., Lambshead, P. J. D., Platt, H. M.**
Detection of pollution-induced disturbance in marine benthic assemblages with special reference to nematodes 195–202

**NOTE**

**Gray, J. S.**
Use and misuse of the log-normal plotting method for detection of effects of pollution – a reply to Shaw et al. (1983) 203–204

**RESEARCH PAPERS**

**Wright, R. T., Coffin, R. B.**
Planktonic bacteria in estuaries and coastal waters of northern Massachusetts: spatial and temporal distribution 205–216

**Redalje, D. G.**
Phytoplankton carbon biomass and specific growth rates determined with the labeled chlorophyll *a* technique 217–225

**Davis, M. W., Lee, H., II**
Recolonization of sediment-associated microalgae and effects of estuarine infauna on microalgal production 227–232

**Fisher, N. S., Burns, K. A., Cherry, R. D., Heyraud, M.**
Accumulation and cellular distribution of $^{241}Am$, $^{210}Po$, and $^{210}Pb$ in two marine algae 233–237

**Pocklington, P., Hutcheson, M. S.**
New record of viviparity for the dominant benthic invertebrate *Exogone hebes* (Polychaeta: Syllidae) from the Grand Banks of Newfoundland 239–244

**Clifton, R. J., Stevens, H. E., Hamilton, E. I.**
Concentration and depuration of some radionuclides present in a chronically exposed population of mussels *(Mytilus edulis)* 245–256

**Fleeger, J. W., Chandler, G. T.**
Meiofauna responses to an experimental oil spill in a Louisiana salt marsh 257–264

**Bradbury, R. H., Young, P. C.**
Coral interactions and community structure: an analysis of spatial pattern 265–271

**Dobbs, F. C., Vozarik, J. M.**
Immediate effects of a storm on coastal infauna 273–279

**Hirche, H.-J.**
Overwintering of *Calanus finmarchicus* and *Calanus helgolandicus* 281–290

**Båmstedt, U.**
RNA concentration in zooplankton: seasonal variation in boreal species 291–297

**Hoppe, H.-G.**
Significance of exoenzymatic activities in the ecology of brackish water: measurements by means of methylumbelliferyl-substrates 299–308
